

The Armstrong County GIS team is in charge of initiating and organizing enterprise GIS data, technology to increase operational effectiveness and support decision making across County agencies. In its ability as the coordinating office for county GIS plan and GIS projects, County GIS administers the County GIS Data warehouse and other enterprise GIS systems such as the ERSI intranet mapping applications.

The GIS team is responsible for developing, implementing and editing the county GIS data layers. This group manages data workflow as well as quality control and quality assurance in county data. Some of the data developed and maintained by the GIS team includes roads, parcels, water features, municipal boundaries, land use, and political boundaries.
